JUSTIFICATION:

The cumulative CPUE for chum salmon at the Bethel Test Fishery is the third lowest on record for this date and is well below the 5- and 10-yr averages. On average, 31% of the chum salmon run has passed Bethel, as of June 29. The historical midpoint of the chum salmon run is July 4. However, the 2015 run appears to be late, weak, or both. The subsistence gillnet fishery will remain on a two day per week schedule in an effort to conserve chum salmon. The poor chum salmon run in the Kuskokwim River warrants a total closure of sport fishing for chum salmon in the Kuskokwim River drainage and the prohibition of bait and multiple hooks.
